WILLS'S CIGARETTES

Renard and Krebs' Dirigible.

The first airship to be propelled by an engine was built by Giffard in 1852, and attained a speed of about six miles per hour, but the first really successful Dirigible was that constructed in 1884 by Captains Renard and Krebs, of the French Army. This was of a more scientific design than any of its predecessors, and travelled at the rate of 14 miles per hour, overcoming winds of considerable strength.
